

Secure Video Hosting

Take Back Control of your Videos

The transition from Flash to HTML5 hosting has brought significant changes to the way video is hosted and delivered – a lot of control and security has been lost. Standard HTML5 video hosting relies on the browser to decompress and present video and opens it up for any viewer to directly access. The Clipstream platform gives you back full control of how your videos are transmitted and presented to the user.

We provide this unprecedented level of control and security by decompressing a proprietary video format in JavaScript. Conventional technology relies on standard formats that are easily reused by thieves. Beyond giving you complete control - it also provides valuable security controls, including client specific dynamic watermarking and domain locking.

		Standard HTML5
Blocks direct access to download high resolution source files by viewers	●	●
Global network of streaming servers delivering only segmented video to viewers	●	●
Proprietary format that cannot be easily reused	●	●
Full control over decompression and playback	●	●

Play Everywhere

Using industry standard JavaScript and HTML to implement our unique video delivery approach, Clipstream videos play everywhere you need them too. Always without requiring any additional plugins or configuration by the viewer.

Advanced Security Features

Watermarking

Overlay video with dynamic, viewer specific watermarks. Other watermarking solutions are often static and generic to all users. The Clipstream platform provides dynamic viewer specific watermarks to ensure you can trace content back to the leak.

Domain Locking and Secure Embedding

Ensure clips can only be embedded and played on domains you specify. Embed videos securely with HTTP enabled embed codes

Robust Viewer Experience Controls

Advanced features allow you to provide an excellent, secure, and controlled viewer experience. Prevent looping and limit the number of views per viewer, disable playback controls preventing pausing and skipping, or require a strong password to begin viewing.

End-to-end platform

A robust end-to-end platform - Clipstream provides the broad feature set you need to enable secure video hosting. Simple drag-and-drop uploading along with powerful cloud encoding make setting up a new video simple for all users. Powerful server and player APIs give unlimited flexibility in integrating the platform to your workflow. Automate the uploading and hosting of your video library - or accept uploads from your users.

- Drag and drop uploading and encoding
- Easy to manage video catalog
- Server and Player APIs
- Customizable start and end images
- Detailed reporting with geographic details on viewers
- Trusted support via email, online chat, and phone
